

Five environmental reasons to choose Tetra Recart®

Tetra Recart® is an environmentally sound alternative to steel cans and glass jars. Our carton packages can be used to pack a range of products that are normally packed in cans and jars.

Canned food two centuries smarter

1 Reduced carbon footprint

■ Carbon emissions from Tetra Recart® over the lifetime of the package are 81% lower* than those of steel cans and glass jars.

■ Tetra Recart® uses only about 40%* of the energy of steel cans and glass jars, from manufacturing to distribution to waste management.

Carbon emissions, index

2 The pack that 'grows back'

■ At least 67%** of the material in a Tetra Recart® carton package comes from a renewable responsibly managed resource – trees. Trees absorb carbon from the atmosphere turning it into wood and releasing oxygen, providing us with air to breathe.

■ The only thing on a steel can or glass jar that comes from a renewable resource is the paper label.

Renewable share

3 Forward-thinking forestry

■ Since 2007, Tetra Pak has delivered more than

480 billion

Forest Stewardship Council™ (FSC™)-labelled packages.

100 %

of Tetra Recart® packages are FSC™-certified.

■ FSC™ certification is your guarantee that the paperboard used in Tetra Recart® carton packages comes from responsibly managed forests and other controlled sources.

The FSC licence code of Tetra Pak is FSC™ C014047.

4 Fewer trucks on the road

■ Tetra Recart® carton packages are efficient to transport because of their rectangular shape and light weight. Six to ten times more empty Tetra Recart® carton packages can be transported on a single truck compared with cans. When it comes to filled packages, you can get 10–20% more units per truck compared with cans.

5 A new life for packages

■ Like all beverage cartons from Tetra Pak, Tetra Recart® is recyclable. Recycled cartons can be turned into new products like roofing tiles, crates, carton boxes and more.
