

MAINTAINING FUNCTIONALITY

BEVERAGE PRODUCER IN EUROPE

CHALLENGE

The automation equipment was outdated and the spare parts were no longer available on the worldwide market.

SOLUTION

The existing control system was carefully replaced with a modern solution.

RESULTS

- √ Total shutdown time less than 4 hours, minimising the production stop time
- √ Test changes took place over weekends, so when actual changeover took place all functionalities were well tested
- √ The new control system allowed for production reports to be added – a new feature which was very useful for future performance management
